1 User-cognizant multidimensional analysis

Sunita Sarawagi

September 2001 The VLDB Journal — The International Journal on Very Large Data Bases, Volume 10 Issue 2-3

Full text available: pdf(248.65 KB) Additional Information: full citation, abstract, index terms

Our goal is to enhance multidimensional database systems with a suite of advanced operators to automate data analysis tasks that are currently handled through manual exploration. In this paper, we present a key component of our system that characterizes the information content of a cell based on a user's prior familiarity with the cube and provides a context-sensitive exploration of the cube. There are three main modules of this component. A Tracker, that continuously tracks the parts of the cub ...

Observations on nondeterministic multidimensional iterative arrays

Joel I. Seiferas

April 1974 Proceedings of the sixth annual ACM symposium on Theory of computing

Full text available: pdf(878.38 KB)

Additional Information: full citation, abstract, references, citings, index

Let NIA(d) be the family of languages accepted within linear time by nondeterministic ddimensional iterative arrays. (On-line deterministic multidimensional iterative arrays have been studied by Cole [2].) It has been observed [8] that every language accepted by a onedimensional single-head Turing machine simultaneously within time n2 and space n is in NIA (2). Our main result (Theorem 2) generalizes this observation to NTIME(nd

Fast detection of communication patterns in distributed executions

Thomas Kunz, Michiel F. H. Seuren

November 1997 Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research

Full text available: pdf(4.21 MB) Additional Information: full citation, abstract, references, index terms

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide
